Comments from WON Communications on CBRS band and PAL sizing

On Behalf of WON Communications Employees, current and future customers, we would like to express our genuine interest in seeing the CBRS band PAL sizing become an affordable option for our small Wireless ISP (WISP). Serving parts of rural and urban SouthWest Missouri, the promise of expanded rural opportunity exists through the use of the public's CBRS band. In SW Mo, our deciduous topography provides significant hurdles to bandwidth delivery. The opportunities for delivering great services to our neighbors are significant with CBRS and we stand by the positions expressed by WISPA, industry associated vendors and other fellow WISPs serving rural America.

Please **do not** expand the PAL procedures to regional tracts. Census tract based allocation gives us an opportunity to utilize CBRS to effectively reach places we could not before. Help WISP's and those in rural America in the same manner as when ISM and UNII bands were designated junk bands. Unburdened by significant impediments, our industry can put these resources to great use towards the goal of 100% rural Internet access.

Thank you for your time and consideration.

Sincerely,

WON COMMUNICATIONS
